

How to mark a document invalid after splitting during validation

000035811 | How To | Last updated 2026-09-16 | TotalAgility

ISSUE

During Document Review, when we split a document, the new document is marked invalid as it has no document type,

We would like the same behaviour during Validation.

SOLUTION

To achieve this, we must do the following:

- Create a DotNet action on the Validation **activity** form that calls the [CaptureDocumentService.UpdateDocumentFieldValue](#) api to update the document's System Field 'Valid' value to be **false**

Required Mappings:

SessionId	Global Variable - SESSION_ID
DocumentId	ValidationControl.NewSplitDocumentId
runtimeField	
Id	5B83535412F142669762C8C08CFE690F
Value	false

- Create a RefreshCaptureForm action

These two actions should then be mapped into the **After Split Document** Event:
