

ControlSuite : Support for .Net 10 when .Net 8 becomes end of life

000044407 | Reference | Last updated 2026-09-01 | ControlSuite

Issue

With .NET 8.0 reaching end of life on November 10, 2026, it is important to know if ControlSuite is supported with .NET 10.0.

Solution

The product development team is pleased to share that ControlSuite version 2025.2 RTM has been successfully tested with .NET 10.

We would like to inform you that upgrading to .NET 10 is officially supported for ControlSuite versions and higher.

However, we advise that the Audit Log Viewer does not currently operate with .NET 10 and will require .NET 8 to function effectively.

NOTE: A fix is now available upon request for the Audit Log Viewer in ControlSuite to allow full compliance with .Net 10. Please log a case to request the file.

We also announce that the upcoming release of ControlSuite, version 2025.2.3, will include .NET 10 in its installation prerequisites.

Steps if .NET 8.0 is removed in Error for servers hosting Audit Log Viewer:

If .NET 8.0 / 6.0 is removed by mistake on earlier versions of ControlSuite, it can be reinstalled using the latest Hosting Bundle. This will restore the system to an operational state.

Other Versions:

All other versions of ControlSuite will continue to operate using .NET 6.0 or .NET 8.0, see table below.
