

Change in behavior after upgrade Total Agility and you need to press enter to validate each field

000045968 | Reference | Last updated 2026-09-10 | TotalAgility

ISSUE

- The issue is as follows: in 8.1, when clicking on the **complete button** for fields that were valid regardless if the **Enter** key was pressed:
- The behavior change in 2026.2 is that now fields with the red dot require the "**Enter**" key to be pressed for each field when hitting the Complete button :
- The message will not let you continue
- There are three workarounds:
 - Pressing "Enter" for all fields
 - Use the option "Allow validation to complete with invalid fields" for the process
 - Change the form to force all fields to be valid, and not force empty fields to be valid.
- A bug was generated to address the change in behavior:
- Bug 2254502: Field Confirmation behavior changed between 8.1 and 2026.2

SOLUTION

Workaround explained above, but the Bug 2254502 was fixed in 2026.3.2
