

Can the red cross size which represents missing images be changed?

000045987 | Troubleshooting | Last updated 2026-09-11 | TotalAgility

Issue

Users might sometimes get a big red X instead of their images displayed:

This placeholder doesn't correspond with the inline image's size, and sometimes can be so big, that it generates an extra page for the document, using additional page licenses.

Solution

Enhancement Request 2263003:KTA 8.0 - Control the size of the red "X" for inline images will address this issue in TotalAgility 2027.1

Applies to

Product	Version	Build	Environment	Hardware
TotalAgility	Below 2027.1
