

Capture and DST/Time Zone Changes

000045990 | General Info | Last updated 2026-09-11 | General Support, Kofax Capture, Kofax Import Connector, Transformation

ISSUE

Does Capture require any patches or configuration changes when a region changes its Daylight Saving Time (DST) rules or adopts a new time zone policy?

A customer using Kofax Capture, KIC, KTM, and the Documentum Export Connector asked whether any product patches or configuration changes are required when a jurisdiction changes its Daylight Saving Time (DST) policy or adopts a permanent time zone.

The customer wanted to understand whether the change would impact product functionality or timestamp handling within the Capture environment.

SOLUTION

- 1 No product-specific patches or configuration changes are required solely due to DST or time zone policy changes.
- 2 Capture relies on the **local Windows system time and regional settings** and does not use a separate time zone configuration.
- 3 Ensure Windows time zone updates are applied and that all Capture client workstations use consistent regional settings.
